

5. Счетчик

- Формируем запрос так, что в response от сервера всего одна цифра
- Добавление константы
- Подсветка в сравнении с референсным значением
- Зависимый счётчик. (пока идея)
Выбрать 2 других счетчика и использовать их значения
Пример:
«in» - «out» = «посетителей внутри»

The image shows a dashboard with two counter widgets and their configuration panels. The top widget displays the value 111345 in red, with the text "sample showing total number of detector events" below it. The bottom widget displays the value 61345 in black, with the same text below it. Both widgets have a "Demo of counter widget" label in the top right corner. The configuration panels for each widget are shown to the left. The top panel is for the widget showing 111345, and the bottom panel is for the widget showing 61345. Both panels have a "Query" section with "Select" and "Filter" options. The "Select" option is set to "Event type" and the "Filter" option is set to "Event type == detector". The "Visualize" section for both widgets has "VisualizeType" set to "Counter". The "Counter" section for both widgets has "Field / set" set to "Event type", "Value op" set to "count", and "Offset" set to 50000. The "Highlight if" section for both widgets has a red toggle switch, "Value" set to "Value", "compare operation" set to ">", and "Reference" set to 100000.
